

POWDER COATING LINES FOR TRANSFORMERS

Prisms unique powder coating line for transformers

Traditional coatings do not offer adequate corrosion protection of transformers and the space between the fins especially in hot and humid climatic conditions.

Prism special Nano technology coating using spray process followed by 2-coat powder process gives the maximum protection and life to the transformer.

Prism supplies powder coating lines for transformers that includes

- Blasting
- Chemical Pre-treatment
- Powder coating booths
- Ovens
- Conveyors
- Waste water treatment systems
